ABOUT US

Hex is a complete Technology Solution Provider for controlling & optimizing all business operations in any growing MSME. Established in the year 2006 by Mr. Deep Dua aiming to utilize the latest technologies for the creation of systems to provide ease in managing & controlling the business.

Since its inception Hex has been a technology partner of 300+ businesses, across sectors, including manufacturing, Services, Trading, and OEMs to name a few.

Why our customers prefer HEX products

- Best-in-class service and customer support leading to higher user acceptance
- Low implementation time in any type of industry
- Hands-on experience & expertise in the onboarding and training process
- Single integrated platform for every area of a business
- Value for money solutions each time, every time
- Latest technologies serving the needs of every MSME as per evolving times
- Subscription-based pricing model for our software products and services
- Paving the way for Artificial Intelligence based decision-making in business operations

5 M's Of Business Management

The foundation of business management is divided into 5 key areas to keep, help organize, plan & direct all resources to achieve the company's objective

Shop Floor Management(SFM)

SFM is a software system used to track, streamline and report the flow of material, production status, work in progress, quality checks & finished goods in a manufacturing unit. SFM gives powers in controlling and managing the full shop floor by enabling

- Finished goods to Raw material traceability
- Real-time production status with production & raw material yield
- FIFO, FEFO, LIFO utilization of raw material
- Live production costing
- control on stock movement & job-worker inventories with rejections
- Flexibility to incorporate every manufacturing flow

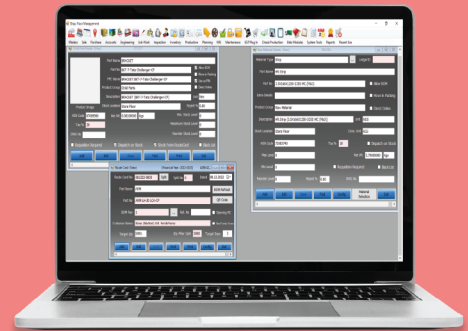

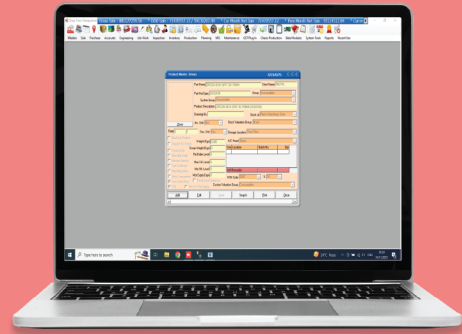

SFM empowers various areas of your Shop Floor:

Material – Material maintained in stores, shop floor (work-in-progress) including raw materials, finished goods, consumables, bought-out products.

Machinery, Equipment, and Tools – Various mechanical, electrical, electronic, and thermal equipment along with various tools used to speed up production and improve the productivity of the business.

Staff – Skilled and experienced staff working with minimal errors and maximum perfection.

Quality Control – The area which ensures that the product is flawless and up to the customer's satisfaction.

EMS(Enterprise Management System):-

EMS(Enterprise Management System) is an ERP software to accurately maintain and monitor the whole industry from a single system. EMS solves the problems of inaccurate & manipulated data, no checkpoints and validations in place for the material and financial management over the whole industry.

The knowledge cumulated from multiple sectors & varied processes, turnovers & sizes, were all built inside EMS, making it a standard in itself.

The variety of modules & flows along with the latest reformatations & functionalities, enables a smooth & satisfied customer experience all around.

Power and Benefits of EMS:-

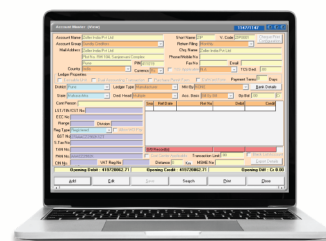

- Complete package, supporting all the business processes
- Developed using the latest tools and technologies available
- Commercially suited for organization of all sizes
- Industrial reformatations and process improvements continuously integrated
- Multiple reporting formats suited for every MSME

The new features in development surrounding the EMS are:

- Taking it to Mobile & Web platforms
- Incorporating Hawkeye and other automation products for accuracies
- Reaching down to per-user basis cloud infrastructure

HAWKEYE (An Industrial IoT Product)

Hawkeye is an IIoT product that uses multiple platforms to monitor & improve production efficiencies by determining bottlenecks, planning & managing assets more accurately.

KEY BENIFITS

- *Creating an Accountability structure of all the departments around a shop floor*
- *Accurate & Real-Time measurement of the Performance of machines & individuals*
- *Reducing Communication Delays & gaps with real-time alerts*
- *Ensuring Sustainability by implementing systems to keep critical parameters in checks*

Digitalizing Your Shop Floor

- Simple Plug n Play connectivity for your machine
- All asset information management in single device
- Informative Machine Display Unit M.D.U.
- Live production & performance measuring on Mobile App

Hawkeye

Focus On Your Utilization

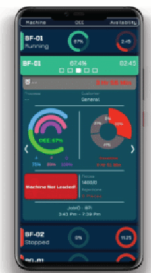

- Real-time Utilization reporting from your shop floor
- Accurate Downtime Alerts as when they are happening
- Hidden Capacity Evaluation of your industry
- Operating Cost Evaluation based on live and actual data

Minimize Communication Gaps

- Real-time distress alerts on Hawkeye App
- Go the GEMBA ("The actual place")
- Instant quality reporting during every manufacturing process
- Informative andon system for every production area, maintenance, stores & tool rooms

Sustainable Continuous Improvement

- Graphical target monitoring of daily production
- Live evaluation & comparison with industry Standards
- Root cause analysis of major bottlenecks & downtimes
- Productivity-based incentive mechanisms for workers

SCAN ME

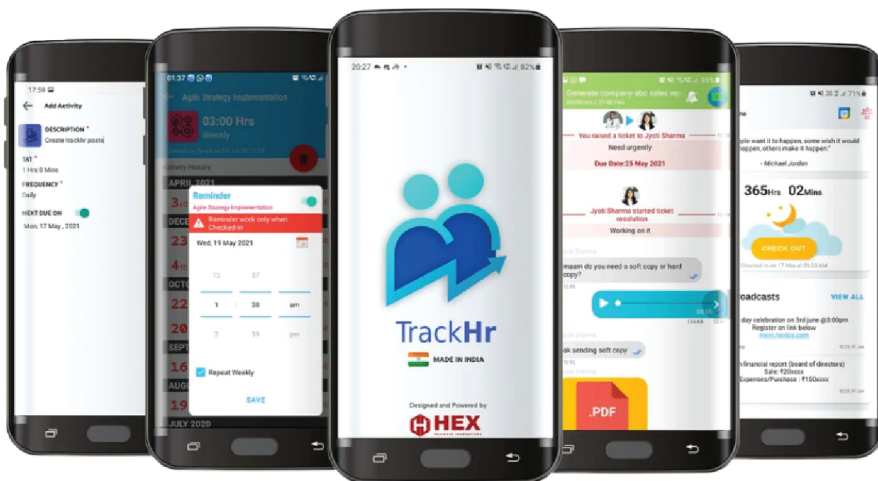

To-Do List & Work Management System

Stay on track with tasks, meetings, and deadlines. Always have the information you need for a successful project timely accountability & efficient management.

Performance Management System

Real-time individual employee performance with area-wise scoring based on actual task & KPI measurement

TrackHR

GPS-based Employee Attendance tracking

Live notifications of every team member on Check-In/Out with the location.

Automatic Daily Work Reports

Take care of all your communication and organization tasks with automatic signals to all management and team leaders daily.

Automatic Overtime & Salary Calculator

With automated attendance, generate work hours and overtime salary sheets. Generate full teams & worker staff attendance with single click anytime & from anywhere

Privacy Assured Information Sharing Platform

Managers handle a lot of different responsibilities while they're at work. This can be difficult if they're not consistently updated on the latest happenings with their team. With messaging, you can share any information you need while maintaining complete anonymity to keep everyone up-to date.

SCAN ME
